

BAMGBOSE AKINLADE HUSSEIN

Software Engineer | .NET Backend Developer | JavaScript / Next.js Frontend Developer

Ogun State, Nigeria • +234 703 663 1786 • [Email](#) • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineer and First Class Computer Science graduate with hands-on experience building web applications across frontend and backend development. Strong in C#, ASP.NET Core/MVC, Web APIs, Entity Framework, JavaScript, React.js, Next.js, Tailwind CSS, databases, Git and API integration. Practical experience in deep reinforcement learning, including building a custom Gymnasium environment and training/evaluating a PPO agent. Interested in reliable software systems, artificial intelligence, and empirical, reproducible experimentation.

TECHNICAL SKILLS

Backend: C#, .NET, ASP.NET Core, ASP.NET MVC, Node.js, Web APIs, Entity Framework, REST APIs, JWT authentication, Swagger

Frontend: JavaScript, React.js, Next.js, TypeScript, HTML/CSS, Tailwind CSS, Bootstrap, Redux

AI / Machine Learning: Python, Reinforcement Learning, Deep Reinforcement Learning, PPO, Gymnasium, Stable-Baselines3, PyTorch, YOLOv8, model training and evaluation

Databases: PostgreSQL, MySQL, relational database design, data access with Entity Framework

Tools & Practices: Git, GitHub, API integration, debugging, testing, reproducible experiments, Matplotlib, Jupyter

PROFESSIONAL EXPERIENCE

GIANTworks

Next.js Frontend Developer — Voluntary

Nigeria

Present

- Contribute to a business-management web application for artisans, freelancers, and business owners using Next.js, React, JavaScript, and Tailwind CSS.
- Build responsive interfaces for client management, jobs, invoices, receipts, income and expense tracking, and integrate frontend components with backend APIs.

Flexisaf Edusoft Limited

Software Engineer

Nigeria

Mar 2025 – Present

- Develop and maintain software solutions using JavaScript, React/Next.js and C#/.NET technologies.
- Build and integrate application features, APIs, authentication flows, and database-backed functionality; debug issues and improve application reliability.

Sysbeams

.NET Backend Developer / Software Engineer

Ogun State, Nigeria

Mar 2024 – May

2025

- Contributed to train, student, and university voting applications during an internship, developing backend functionality with C#, .NET/ASP.NET, APIs, and databases.
- Implemented authentication, booking, student-process, and digital-voting functionality and collaborated with developers and UI/UX contributors to test and refine applications.

CodSoft

Software Engineer

Remote

Mar 2022 – Apr

2024

- Built and improved responsive web interfaces, including interactive product showcase sections and a personal portfolio website.

SELECTED PROJECTS

PPO Platformer — Deep Reinforcement Learning Research Challenge | 2026

Code & Sorcery Lab Graduate Research Assistant Challenge • [Project Repository](#)

- Built a deterministic Mario-style platformer from scratch in Python/Pygame and wrapped it as a Gymnasium reinforcement-learning environment with an 11-value observation vector, six discrete actions, reward shaping, and episode termination logic.
- Trained a Proximal Policy Optimization (PPO) agent with Stable-Baselines3/PyTorch; the selected checkpoint achieved 100% completion on the fixed deterministic evaluation level versus 0% for a random-agent baseline.
- Created reproducible training and evaluation workflows with fixed seeds, checkpoint selection, saved trained weights, learning curves, machine-readable results, and analysis of post-peak training regression.

GIANTworks Business Management Platform

- Contributed frontend features for managing clients, jobs, invoices, receipts, income, and expenses using Next.js, React, JavaScript, and Tailwind CSS, integrated with backend APIs.

EduTrust — Bells University Pitchathon 2026

- Co-developed a technology project focused on verification of Nigerian university academic credentials; achieved second position and received a ₦200,000 prize.

Train Booking Application

- Built a full-stack train booking system supporting route search, seat selection, reservations, authentication, database functionality, and Paystack payment integration.

Apple Plant Disease Detection — AI Project

- Developed a final-year AI project using YOLOv8 for visible apple leaf disease classification, including dataset preparation, model training, evaluation, and performance analysis.

EDUCATION

Bells University of Technology — Ogun State, Nigeria | Bachelor of Technology (B.Tech.) in Computer Science

First Class Honours | 2021 – 2026 • Relevant coursework: Software Engineering, Operating Systems, Data Structures and Algorithms, Artificial Intelligence

AWARDS & DISTINCTIONS

- First Class Honours, Bachelor of Technology in Computer Science, Bells University of Technology.
- Second Position, Bells University Pitchathon 2026 — EduTrust; ₦200,000 prize.

PROFESSIONAL INTERESTS

Software Engineering • .NET Backend Development • JavaScript / Next.js • Artificial Intelligence • Reinforcement Learning • Full-Stack Web Development • API Design • Empirical Software Engineering
